

# JAWS Help with Excel

Numeric keypad 5.	JAWS will announce the data in the current cell
Insert+C	JAWWS will announce the coordinates of the current cell.
Control+G, [x##] :	Moves to cell X##.
F2	Edit whatever is in the cell. Enter or Tab will stop edit mode.
Control Shift D	This keystroke opens a list box of all cells with data. (use when opening a file)
Insert F1.	.Jaws will list details about the worksheet
Alt + [#]:	Alt + #: reads the content of cells located in the row # of the current column (ie: if you were at B1 and pressed alt + 1 2 3 4, it would say the first four things “down” the column, which would be the contents of B1,B2,B3,B4)m
Alt+cntrl+ [#]:	Alt+cntrl+ #: reads the content of cells located in the column number of the current row (it: if you pressed Alt+cntrl+1 2 3 4 it would read the contents of A1 B2 B3 B4)
